

Message to the Workshop in Memory of Prof. A. Bray
Dr. Kozo Iizuka
Honorary member of the CIPM
and Research Adviser to National Metrology Institute of Japan.

I am very pleased to know that the Workshop to remember late Prof. Anthos Bray's achievements will be organized by his colleagues and other concerned researchers and regret not to be able to join in it. It is in my vivid memory that his 70th anniversary was celebrated on the occasion of the 13th IMEKO World Congress in 1994 by dedicating the memorial book "Basic Metrology and Applications" to him. Today, we may refresh our memory of Prof. Bray, who contributed to the development of metrology in the field of force and mass etc. throughout his directorship of Istituto Dynamometrico and Istituto di Metrologia Gustavo Colonnetti. It was really my great pleasure to have worked with him in IMEKO/TC3 and in the International Committee of Weights and Measures as well as in its Consultative Committee for Mass and Related Quantities (CCM), in which he was my predecessor as the President.

I do hope the Workshop will be fruitful and wish all the attendees their further success in the future.

12 October, 2007.
